

Abstract of the Disclosure

Techniques are disclosed for managing data in a cache. A first cache memory is provided that included data. A second cache memory is provided that also includes data in which at least some of the data in the first cache memory is the same as at least some of the data in the second
5 cache memory. In response to a request for data that is stored in both the first and second cache memories, one of the cache memories are chosen in accordance with an access balancing technique.
